

carpion

A new concept in electric heating

# 7 Good reasons for an electric space storage heater

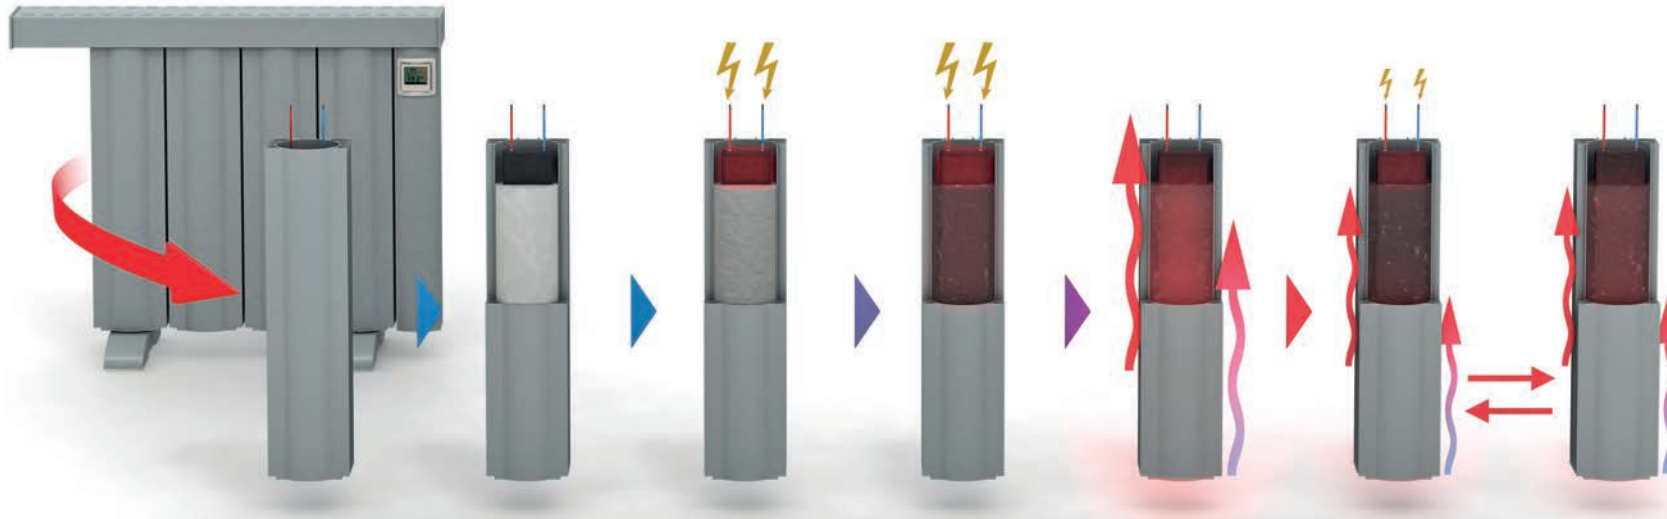

# 7 Good reasons for an electric space storage heater from carption

## 1. Up to 20% less consumption!

The carption space storage heater has up to 20% lower consumption values than other electric heating systems. Compared to night storage furnaces, the consumption values are up to 50% lower, see reasons 2+3.

## 2. Intelligent economy shut-down

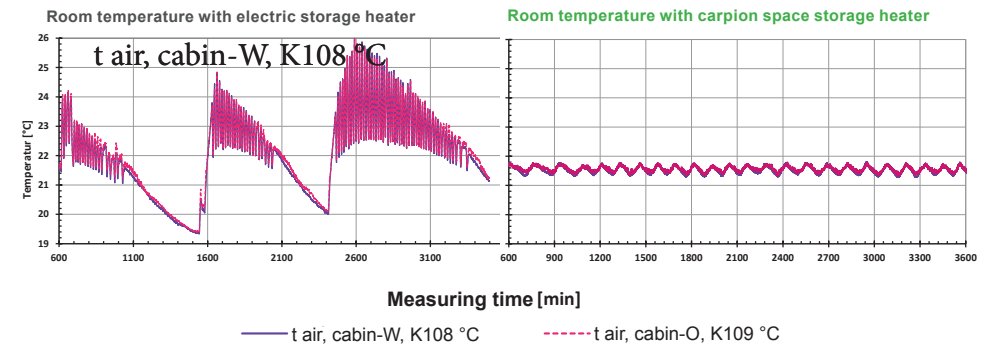

"Mini-power station" in the heater: The phase change material changes its aggregate state depending on the heat energy supplied and the ambient temperature for the optimal storage and release of heat.

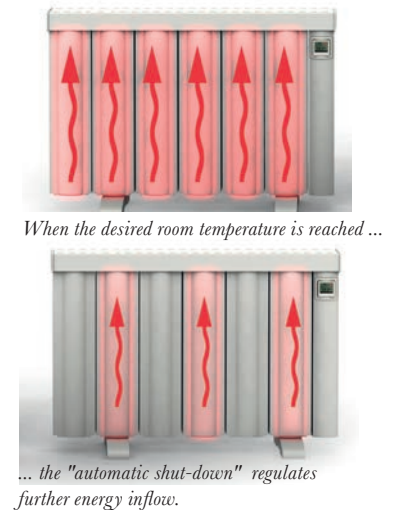

## 3. Comfort + Saving

With the patented heating system and the infrared effect, carption achieves the comfort level category A according to EN ISO 7730, conventional electrical heating achieve only category C.

### Electric heating and carption space storage heater in comparison

The comparison of measurements carried out by a renowned Swiss research institute in 2017 shows: With carption there is no overshooting of the room temperature as with conventional electric heating systems. This means continuous comfort and energy savings, since no temperature fluctuations have to be compensated for.

## 4. Design + colours

The deDeveloped by a renowned designer, the heater is a visual highlight in your living space.

## 5. Flexibility of use

3 installation options: Supporting feet, fixed wall mounting or on retrofittable rollers. Endless possibilities for use: Vacation home/apartment, recreation room, under roof/basement conversions, conservatory, garage, yacht and much more

## 6. Made in Germany

Developed and designed in Germany, the room storage heater is also manufactured entirely in Germany.

## 7. Independence with solar energy

It takes only 3 steps to gain energy independence by using the self-generated power: I. Install photovoltaic system. II. Install storage battery. III Connect the carpion space storage heater to an internal power supply.
